### RAPTOR 660 Clutch Kit Install:

Remove #17 spring clutch boss, #10 larger I.D. friction plate and replace with full size standard friction supplied in kit. Driveline clutch kit comes with 7 full size frictions and 2 larger I.D. friction plates for a total of nine. Only 8 frictions will be used no matter which combination is selected. The OEM combination uses 6 full size frictions and 2 larger I.D. frictions for a total of eight. The heavier duty combination uses 7 full size frictions and 1 larger I.D. friction plate: The last friction plate installed will be the larger I.D. friction no matter the combination. Remember when installing a clutch always start with a friction plate and end with a friction plate.
